On Exhibit from May 12th to June 27th, 2014 in the Health Sciences Library of New York Medical College

Open to the public Sunday to Thursday, 10-5 p.m.*

The latest in a series of exhibits at the Health Sciences Library of NYMC - From DNA to Beer: Harvesting Nature in Medicine & Industry

MICROBES—tiny organisms too small to be seen with the naked eye—have altered human history. Life forms such as bacteria, yeasts, and molds can cause sickness or restore health, and help produce foods and beverages. Scientists, in partnership with industry, have developed techniques to harness the powers of these microbes. This exhibition explores some of the processes, problems, and potential inherent in technologies that use life.
